Superfund Branch
726 Minnesota Ave.
Kansas City, Kan. 66101

Ms. Fuerst:

I am involved in a 2 year science research project involving soil contamination, water contamination, and the heavy metal levels of hair in mammals in the Galena, Kansas area. Last year I finished the soil testing in a 1.5 mile radius around the former Eagle-Picher smelter. This year I will be working with water and hair.

I need to field tests the E.P.A. did that determined the action they are taking at the moment in the Galena, Kansas area. The whole report would be helpful for reference and footnotes in the research paper. If you have the procedures they used in determining the levels please send those also.

Thankyou,

Angela Copple
